Bolgiano's CAPITOL PARK LAWN GRASS SEED THE NATION'S PRIDE

WE CAN say with pride that it is the accumulated experience of fifty years that has made possible the development of the Capitol Park Lawn Grass Mixture. It contains a carefully selected, well-balanced blend of high-quality re-cleaned seed. Through the years we have learned that the finest lawns for the Washington area are those made of fine-bladed deep-rooting grass. It is an easy matter to have a good-looking lawn in spring but it is the year-round test that determines the quality of good lawn seed. We are proud of our Capitol Park Lawn Seed and we believe you will find this leader in the Washington area the answer to your lawn problem.

BOLGIANO'S MODERN LAWN GRASS MIXTURES

BOLGIANO'S "WHITE HOUSE" SHADY LAWN GRASS SEED

The Grass That Will Grow in Shady Places

To provide a turf for shady places which would match the turf of our Capitol Park Lawn Grass in the sun we experimented with grasses best adapted for growing in the shade until this formula was perfected. The resulting White House Shady Lawn Seed has removed cause for worry about those once bad places under trees.

Lb. 65c.; 5 lbs. \$3.00; 10 lbs. \$5.50; 25 lbs. \$13.25

HORMONE-TREATED LAWN SEED

Treating seeds with Rootone Hormone Powder serves to augment the natural hormones which stimulate root-formation and top-growth. In our Hormone-treated Lawn Grass Mixture we use only the best varieties of seed, including Bent Grass.

Lb. 85c.; 10 lbs. \$7.75; 25 lbs. \$18.75

KENTUCKY BLUE GRASS (*Poa pratensis*)

This is undoubtedly the best of lawn grasses for neutral soils. Its splendid root system forms a tough sod that will stand hot, cold or dry weather. Although Blue Grass requires about two years to get well established, it is well worth waiting for. Can be sown in a mixture of other grasses. Sow in fall or spring at the rate of 5 pounds per 1000 square feet.

Lb. 50c.; 10 lbs. \$4.50; 25 lbs. \$10.00

RED-TOP (*Agrostis vulgaris*)

A valuable, permanent, narrow-blade grass especially adapted to our climate. Used in most lawn mixtures.

DOMESTIC RYE GRASS

A quick-growing grass used as a nurse-crop in many lawn mixtures. Sow 10 pounds per 1000 square feet of lawn.

Lb. 25c.; 10 lbs. \$2.00; 25 lbs. \$4.00

CHEWINGS FESCUE

This important component of all good shady lawn mixtures forms a low, dense, mat-like turf of fine needle-like leaves. It is popular for lawns and golf courses because of its drought-resistance and ability to thrive on most soils. If used alone, sow 8 pounds per 1000 square feet.

Lb. 95c.; 5 lbs. \$4.50; 25 lbs. \$20.00

Prices quoted on grass seed do not include postage. See page 2 for Parcel Post rates. If postage is included with order, seed will be sent by Parcel Post, otherwise shipment will be made by Express Collect.

YOUR VEGETABLE GARDEN IN 1945

THE past few years have seen a great return to the soil on the part of thousands of Americans who had forgotten, or had never known, the feel of a hoe-handle. Their efforts have met with rich success, and we are told on good authority that the markets would have been considerably depleted had it not been for the home-grown vegetables that supplemented commercially raised ones.

We feel sure that a very large percentage of these new gardeners are going to carry over their efforts not only to this coming season but long after the war. They have discovered that the vegetables they raise close to their own kitchen door are much more palatable than the best they can buy. A few extra rows provide a surplus for canning, and thus supplement the winter food supply.

When the pressure of wartime gardening is over, it will be possible to spend more time on flower-growing. Here is a vast field open to the garden-lover,—a hobby to carry him around the year, season after season. Novelties in both flowers and vegetables will keep up his interest even if the time ever comes when he can consider himself an "expert."

Sow in drills 1 foot apart and 1 inch deep, as early as the ground can be worked, and for a succession continue sowing up to the middle of August. Frostproof Cabbage Plants WILL DOUBLE YOUR PROFITS

Ready for Immediate Delivery

Matures Heads Two to Three Weeks Earlier Than Your Home-grown Plants

Our plants are grown in the South where are found soil and climatic conditions just suited for growing tough, hardy Cabbage plants during the winter and early spring. Here the plants develop steadily until they are ready for shipment at 8 to 10 weeks of age. They are then very tough and hardy and can be planted in the open ground a month to six weeks sooner than the more delicate hotbed or coldframe plants.

When spring comes the plants grow very fast, maturing headed Cabbage 2 to 3 weeks sooner than from hotbed or coldframe plants. Think what the difference in profit will be if your crop is matured and marketed before the general crop from home plants is matured!

PARSLEY

One ounce will sow 200 feet of row;
3 to 4 pounds, an acre.

Prices include postage on pkts., ozs.,
1/4 lbs., and lbs.

CULTURE. Parsley needs a mellow, rich soil and the seed is slow to germinate. A good plan is to soak the seed a few hours in warm water and then plant 1/2 inch deep and thin plants to stand 8 to 10 inches apart. If the leaves of curly varieties are all cut off when they are 3 inches tall, growth will be better. Liberal cutting of Parsley improves quality. For winter use move plants to a coldframe or light cellar, or a supply can be potted in 6-inch flower-pots and grown in a kitchen window.

194. Emerald or Extra Curled Dwarf. (70 days.) The beautifully curled bright green leaves are very tender. Long stems make it easy to bunch for market. An attractive garnish variety. Pkt. 5c.; oz. 15c.; 1/4 lb. 40c.; lb. \$1.25, postpaid.

319. Market Gardeners' Best Triple Curled. (70 days.) "Best-in-Garden" variety. Robust, free-growing plants which are improved by severe cutting. The large, dark green leaves are beautifully curled. Plants stand heat and cold better than most varieties. Pkt. 10c.; oz. 15c.; 1/4 lb. 40c.; lb. \$1.25, postpaid.

126. Plain or Single. (70 days.) The very dark green leaves are flat, deeply cut but not curled and are principally used for flavoring soups and stews, as the flavor is strong. Can be dried and bottled for winter use. Pkt. 5c.; oz. 15c.; 1/4 lb. 45c.; lb. \$1.50, postpaid.

PARSNIP

One ounce will sow 200 feet of row;
3 to 4 pounds, an acre.

1/4 lbs., and lbs.

CULTURE. Parsnips prefer a rich deep sandy loam. Avoid stony ground and new manure. Sow as early as possible in rows, covering 1/2 inch deep, and press soil down firmly. Thin to stand 5 inches apart in row. Leaving the roots in ground over winter improves the flavor.

SMOOTH or SEMI-WRINKLED VARIETIES. 15-lb. and 60-lb. lots not postpaid.

Peas are not only delicious food but they contain iron and vitamins A, C and B. Every garden needs lots of Peas.

CULTURE. Peas mature earliest in light, rich soil. For general crop use a rich, deep loam or one inclining to clay. When grown in garden sow in double rows 6 to 8 inches apart; the rows 2 to 4 feet apart. Commence sowing the extra-early varieties as early as the ground can be worked in February or March; plant for a succession every two weeks until June, then discontinue until the middle of August, when a good crop may be secured by sowing extra-early and early sorts for fall use. They should be kept clean and earthed up twice during the growth. The wrinkled varieties are not as hardy as the small, round sort and if planted early should have a dry soil or they are liable to rot in the ground. They are, however, the sweetest and best-flavored varieties. The dwarf varieties are best suited for small gardens.

Extra-Early Dwarf Varieties

A VICTORY GARDEN

for

EVERYONE

A vegetable plot within easy reach of your kitchen door will assure you of fresh green vegetables all summer. And you will have the extra satisfaction of knowing that your gardening is helping to save needed food and transportation facilities for our fighting men.

It is not necessary to have access to a large piece of ground in order to have a garden. A small patch well cared for will bring far better returns than a large planting that is neglected.

The first vegetable book to be illustrated in full color, "Vegetable Gardening in Color," by Daniel J. Foley, has just been published. It will be very useful to the home gardener, and well worth buying. (We will send it to you. Price, \$2.50.)

"What to plant?" is a question confronting the gardener, especially the beginner, who is unfamiliar with the different varieties. To solve the problem for you, we have made up a collection of vegetables that are the backbone of the garden and favorites on most tables. Turn to page 5, where you will find listed the varieties comprising the collection. By ordering it, you will save both time and money. \$1.75 worth of seed for \$1.25.

A fresh green salad every day will give your family the extra vitamins they need. But don't say to them, "Eat it; it's good for you." Just say, "It's good," and they will agree.

POTATOES

Our Seed Potatoes are grown in the cold North in the famous Potato district of Houlton, Maine, and are the finest obtainable today. Experience has shown that northern-grown Potatoes taken a few hundred miles south produce up to double the crops of home-grown seed of the same varieties. Bolgiano's selected Maine Seed assures not only a larger crop but an earlier one of Potatoes of the highest quality.

We offer only varieties which have proved most satisfactory in our customers' fields and gardens after exhaustive trials.

We are prepared to ship at any time but must warn that shipments ordered made during severe cold weather travel solely at purchaser's risk.

Sweet Potatoes

CULTURE. Don't wait for a rain or a "season" to set out Sweet Potato plants. Harrow your ground well before laying it off, then throw up the ridges higher than you want them, and if the soil is very dry, allow 2 or 3 days for the moisture to rise. Then knock off the top of the ridge just ahead of planting; make a mud batter with water and clay loam, or better, with the addition of fresh cow-dung, about as thick as cream; dip the plants, in hands of about 20, into this, so that mud clings to them.

Plants ready in May and should be planted in May or June.

Big-Stem Jersey. Heavy crops of uniform tubers of good size and quality.

Nancy Hall. Well-known and popular variety.

The health-giving Tomato has become an everyday necessity to most of our people, and during wartime there will not be enough Tomatoes to go around. We, therefore, earnestly urge everyone with a garden to grow all the Tomatoes they have room for and to can, in some form, every Tomato that is not needed for immediate use. Yes, the Tomato is a true Victory Vegetable.

TURNIPS

One ounce will sow 100 feet of row;
2 pounds, an acre.

Prices include postage on pkts., ozs.,
 $\frac{1}{4}$ lbs., and lbs.

Turnip roots provide vitamin C but Turnip tops not only rate excellent as suppliers of vitamins A and C but contain goodly quantities of calcium and iron. Never discard Turnip tops. Used as fresh "greens" they are palatable and highly nutritious.

CULTURE. They do best in highly enriched, light, sandy or gravelly soils. Commence sowing the earliest varieties in April in drills from 12 to 15 inches apart, and thin out early to 6 to 9 inches in rows. For a succession sow at intervals of a fortnight until the last week in July; from then until the end of August sowing may be made for the fall and main crop. Turnips may be preserved until spring by cutting off the tops about 1 inch from the bulb, storing in the cellar or cold shed during the winter, covering the roots with dry sand. They should be harvested before the severe frosts set in, for, though comparatively hardy, few will survive the winters of the Northern States in the open ground.

Every farmer notes the reason for big Pfister yields at planting time: **Even planter drop** due to careful grading; **high germination** count because of careful processing; **quick, vigorous growth** due to good breeding; **standability and resistance** to adverse conditions, due to breeding and testing; **heavy ears** filled with quality grain, again due to Pfister characterist cs.

Be sure to use Gold Tag Fertilizer on your crops this year. You will be glad you did when you see the results.

CHEMICAL NITROGEN FERTILIZERS

The fulfilment of requirements for the defense of the United States has created a shortage in the supply of some Fertilizer materials. Therefore, the War Production Board has deemed it necessary and appropriate in the public interest to formulate the use of fertilizer and has planned the analysis of fertilizer to be used in each state. GOLD TAG FERTILIZERS will be manufactured in accordance with their suggestions as to the proper analysis to be used for each crop grown.

Gold Tag Bone Meal

Contains 2.47% Nitrogen, 23% Phosphoric Acid. We recommend this especially for lawns, gardens and outdoor plants, or any other place where a high-class fertilizer counts. Apply 800 to 1000 pounds per acre.

Gold Tag Raw Bone

Contains 3.7% Nitrogen, 20.5% Phosphoric Acid. Recommended for use the same as Bone Meal when slower action is wanted. It is also higher in Nitrogen.

Gold Tag Tankage

High-grade nitrogenous Tankage containing 8% Nitrogen. A quick-acting Organic Fertilizer.

Gold Tag Superphosphate

Contains 20% available Phosphoric Acid. Recommended for all grain and grass crops.

Gold Tag Sulphate of Potash

Contains 48% Potash; especially used in tobacco fertilizers.

Gold Tag Muriate of Potash

Contains 50% Potash. Helps strengthen stem and leaf growth; improves vegetable, flower, fruit and root crops generally.

GOLD TAG FERTILIZERS are registered in the states of both Maryland and Virginia and are subjected to their inspections and tests.
